

11- EXCEPTION HANDLING

EXCEPTION HANDLING

To find whether a digit lies in the specified range(1-100). Handling exceptions for invalid inputs and out-of-range numbers .

Input Format:

User inputs a number.

Output Format:

Confirm the input or print an error message if it's invalid or out of range.

For example:

| Input | Result |
|-------|------------------------------------|
| 1 | Valid input. |
| 101 | Error: Number out of allowed range |
| rec | Error: invalid literal for int() |

Program:

try:

```
a=input()
```

```
if(int(a)>0 and int(a)<101):
```

```
    print("Valid input.")
```

```
else:
```

```
    print("Error: Number out of allowed range")
```

except:

```
    print("Error: invalid literal for int()")
```

| | Input | Expected | Got | |
|---|-------|------------------------------------|------------------------------------|---|
| ✓ | 1 | Valid input. | Valid input. | ✓ |
| ✓ | 100 | Valid input. | Valid input. | ✓ |
| ✓ | 101 | Error: Number out of allowed range | Error: Number out of allowed range | ✓ |

EXCEPTION HANDLING

Write a Python program that performs division and modulo operations on two numbers provided by the user. Handle division by zero and non-numeric inputs.

Input Format:

Two lines of input, each containing a number.

Output Format:

Print the result of division and modulo operation, or an error message if an exception occurs.

For example:

| Input | Result |
|--------------|---------------------------------------------------------|
| 10 2 | Division result: 5.0 Modulo result: 0 |
| 7 3 | Division result: 2.3333333333333335 Modulo result: 1 |
| 8 0 | Error: Cannot divide or modulo by zero. |

Program:

try:

```
a=input()
```

```
b=input()
```

```
c=int(a)/int(b)
```

```
d=int(a)%int(b)
```

except ZeroDivisionError:

```
print("Error: Cannot divide or modulo by zero.")
```

except:

```
print("Error: Non-numeric input provided.")
```

else:

```
print("Division result:",c)
```

```
print("Modulo result:",d)
```

| | Input | Expected | Got |
|---|----------|---------------------------------------------------------|---------------------------------------------------------|
| ✓ | 10 2 | Division result: 5.0 Modulo result: 0 | Division result: 5.0 Modulo result: 0 |
| ✓ | 7 3 | Division result: 2.3333333333333335 Modulo result: 1 | Division result: 2.3333333333333335 Modulo result: 1 |
| ✓ | 8 0 | Error: Cannot divide or modulo by zero. | Error: Cannot divide or modulo by zero. |
| ✓ | abc 5 | Error: Non-numeric input provided. | Error: Non-numeric input provided. |

EXCEPTION HANDLING

Write a Python program that asks the user for their age and prints a message based on the age. Ensure that the program handles cases where the input is not a valid integer.

Input Format: A single line input representing the user's age.

Output Format: Print a message based on the age or an error if the input is invalid.

For example:

| Input | Result |
|--------|----------------------------------|
| twenty | Error: Please enter a valid age. |
| 25 | You are 25 years old. |
| -1 | Error: Please enter a valid age. |

Program:

```
try:
```

```
    a=input()
```

```
    if int(a)>=0:
```

```
        print("You are",a,"years old.")
```

else:

```
print("Error: Please enter a valid age.")
```

except:

```
print("Error: Please enter a valid age.")
```

| | Input | Expected | Got | |
|---|--------|----------------------------------|----------------------------------|---|
| ✓ | twenty | Error: Please enter a valid age. | Error: Please enter a valid age. | ✓ |
| ✓ | 25 | You are 25 years old. | You are 25 years old. | ✓ |
| ✓ | -1 | Error: Please enter a valid age. | Error: Please enter a valid age. | ✓ |
| ✓ | 150 | You are 150 years old. | You are 150 years old. | ✓ |
| ✓ | | Error: Please enter a valid age. | Error: Please enter a valid age. | ✓ |

EXCEPTION HANDLING

Develop a Python program that safely calculates the square root of a number provided by the user. Handle exceptions for negative inputs and non-numeric inputs.

Input Format:

User inputs a number.

Output Format:

Print the square root of the number or an error message if an exception occurs.

For example:

| Input | Result |
|-------|---------------------------------------------------------------|
| 16 | The square root of 16.0 is 4.00 |
| -4 | Error: Cannot calculate the square root of a negative number. |
| rec | Error: could not convert string to float |

Program:

```
import math
```

```
try:
```

```
    n=input()
```

```

n=float(n)
if n < 0:
    print("Error: Cannot calculate the square root of a negative number.")
else:
    r= math.sqrt(n)
    print("The square root of { } is {:.2f}".format(n, r))

except ValueError:
    print("Error: could not convert string to float")

```

| | Input | Expected | Got | |
|---|-------|---------------------------------------------------------------|---------------------------------------------------------------|---|
| ✓ | 16 | The square root of 16.0 is 4.00 | The square root of 16.0 is 4.00 | ✓ |
| ✓ | 0 | The square root of 0.0 is 0.00 | The square root of 0.0 is 0.00 | ✓ |
| ✓ | -4 | Error: Cannot calculate the square root of a negative number. | Error: Cannot calculate the square root of a negative number. | ✓ |

EXCEPTION HANDLING

Develop a Python program that safely performs division between two numbers provided by the user. Handle exceptions like division by zero and non-numeric inputs.

Input Format: Two lines of input, each containing a number.

Output Format: Print the result of the division or an error message if an exception occurs.

For example:

| Input | Result |
|----------|-----------------------------------------|
| 10 2 | 5.0 |
| 10 0 | Error: Cannot divide or modulo by zero. |
| ten 5 | Error: Non-numeric input provided. |

Program:

```
try:  
    a=input()  
    b=input()
```

```
c=float(a)/float(b)
```

```
except ZeroDivisionError:
```

```
    print("Error: Cannot divide or modulo by zero.")
```

```
except:
```

```
    print("Error: Non-numeric input provided.")
```

```
else:
```

```
    print(c)
```

| | Input | Expected | Got | |
|---|----------|-----------------------------------------|-----------------------------------------|---|
| ✓ | 10 2 | 5.0 | 5.0 | ✓ |
| ✓ | 10 0 | Error: Cannot divide or modulo by zero. | Error: Cannot divide or modulo by zero. | ✓ |
| ✓ | ten 5 | Error: Non-numeric input provided. | Error: Non-numeric input provided. | ✓ |
